Utilization of ETVO schedule

The ETVO Monthly Schedule has been designed to provide Ontario schools with a daily listing of all ETVO programs. Last-minute changes in programming and special features can be brought to the attention of teachers. It is important, then, to check the schedules in the Teachers' Guides against this up-to-date schedule.

The ETVO Monthly Schedule is organized in the following way:

1. Programs are listed by school divisions (e.g., Primary, Junior, etc.)
2. The series title, Teachers' Guide number, program number and individual program titles are given (e.g., BIOLOGY (S19a): 1. What is Biology?)
3. The duration of each program is listed (e.g., 20 min.)
4. TV stations are indicated by call letters, channel number and location (e.g., CKLW [9] Windsor). For detailed channel identification, see page 27.

For detailed description of individual series and programs, and for previewing and post-viewing suggestions related to the programs, teachers will find the Teachers' Guides useful. These guides should be ordered through your school principal.

Cahier de l'horaire de la Tévéo

Le cahier mensuel de la Tévéo vous offre l'horaire précis de la programmation quotidienne des émissions diffusées en français et en anglais par la Tévéo.

Ce cahier mensuel permet d'apporter des changements de la dernière heure et d'intégrer à la programmation certaines émissions spéciales.

Il est donc indispensable de confronter l'horaire imprimé dans le guide du maître avec cet horaire à jour.

Voici comment est conçu l'horaire mensuel de la Tévéo:

1. Les émissions en français pour les francophones, sont énumérées sous la date en français à la suite des émissions en anglais.
2. On y trouve le titre de la série de même que le titre, le numéro du guide du maitre, le numéro de la durée de chaque émission (e.g., Les sciences (F5): 1. Les animaux).
3. Les postes sont indiqués par les lettres d'identité et le nom de la ville (e.g. CKLW (9) Windsor). Voir page 27.

Les guides du maître, que seul peut commander le directeur de l'école, contiennent en plus d'une documentation complète pour chacune des séries, des suggestions pratiques d'utilisation en salle de classe.

Spotlight on a series

Mathematics Around Us

6 programs, 20 minutes each.

This series was prepared for students in the Junior Division. It is designed to make students aware of mathematical structures and concepts that occur in their environment. The programs include such concepts as symmetry, graphs and mathematics in everyday situations.

Program 1, **Symmetry,** is a revised version of the program offered to the Intermediate Division last year. It deals with reflective, bilateral, translatory and radial symmetry in nature and in man-made structures. Program 2 repeats the concepts and examples examined in Program 1. The principles of graphs are introduced in Program 3, **Graphs,** and again in Program 4. Animation in a light and humorous vein is used to emphasize the importance of graphs for illustrating sometimes confusing masses of information in a simple way. Practical examples of graphs will be included from the world at large and from the work of children in the classroom. The five common types of graphs analyzed in the program are pictographs, bar graphs, block graphs, circle graphs, and line graphs.

Program 5, **At Your Service,** and Program 6, **Shopping For Math,** repeated from last year, draw attention to the occurrence of mathematics in activities carried on at such places as the service station and the supermarket. The programs emphasize the practical application of mathematical concepts in familiar situations or experiences.

An attempt has been made to relate mathematics to other subject areas, in order to encourage a wide variety of related follow-up activities. In all of these programs, it is hoped that the ideas and problems that are emphasized will suggest ways to explore these and other mathematical concepts and experiences, inside and outside the classroom.

Programs 1 and 2

SYMMETRY

Several aspects of symmetry found in nature and in the world around us are introduced.

Program Content

This program presents examples of various types of symmetry with the aim of promoting classroom study. Although the program's main emphasis is placed on **reflective symmetry,** some attention is paid to **bilateral, radial** and **translatory symmetries.** Examples, both man-made and natural, render concrete these abstract-seeming geometric concepts.

This program also examines some strictly human notions: Is the human face symmetrical? Why is the heart (which is itself asymmetrical) placed asymmetrically in the human body?

Words like TOMATO and REFER are used to illustrate symmetry, with animation techniques making visual this literal geometry. Palindromic words are examined in this connection.

Finally, examples of floor tiles and wallpaper patterns facilitate an examination of translatory or copy symmetry.

Post-Viewing Suggestions

1. Let the students discover for themselves whether or not the human face is symmetrical with respect to some line. From a magazine or a newspaper, obtain a picture of someone's face and cut it in half along a vertical axis. Show one-half of the face in a mirror to obtain the whole face. Repeat this same procedure with the other half of the face. Is the same face obtained each time?
2. Examine the buildings around the school and list examples of symmetry that can be found. How does man use symmetry in architecture and in engineering?
3. Nature is filled with examples of symmetry. Find examples in flowers, animals, leaves, and insects. Discuss whether these objects are symmetrical with respect to bilateral or radial symmetry.
4. Discuss the meaning of the following terms, introduced in the program: bilateral, asymmetry, radial, translatory, axis, and palindromic.
5. Identify the type of symmetry in various objects, including the following:

   tetrahedron, snowflake, equilateral triangle, butterfly, rectangle, jellyfish, horse, square,

cube, circle, sphere, isosceles triangle, reflection in a pond or lake, flowers, honeycomb, line segment, and hexagon.

6. How is a mirror image related to bilateral symmetry?
7. Find an axis of symmetry for the following:
   a. TOMATO
   b. CHOICE
   c. 8118
   d. TIMOTHY

Programs 3 and 4

GRAPHS

This program introduces the concepts and principles of five basic kinds of graphs.

Program Content

In this program, graphs are developed by beginning with the simple pictograph and progressing to the more complex line graph or plot graph. From the elementary one-to-one relationship of a simple graph, the program shows how the recording of larger quantities of information requires some kind of scaling. The bar graph is introduced as the second type of "picture" graph, and its particular suitability for depicting and comparing static data is demonstrated. Block graphs and circle graphs are used to show the relationships of parts to the whole. Finally, students are shown the particular suitability of line graphs for plotting data which changes over a period of time, thus enabling a person to project trends.

Pre-Viewing Suggestions

1. It would be useful for the students to have some knowledge of the words **scale** and **grid.**

Post-Viewing Suggestions

The following are some suggestions for line graphs. Graphs related to the students' personal experiences are recommended, rather than those based on book work.

1. Measure the length of a shadow at regular intervals. Compare the length of the shadow to the time intervals.
2. For one week, plot the number of cars or vehicles that pass the school during the same quarter or half hour each day. Compare the number of vehicles with the days of the week.
3. Advanced students could find ways of plotting graphs showing the time required to fill containers of different shapes.
4. Plot the daily rainfall for a month in your area. Compare the curve that results with those obtained for rainfall in Vancouver, Cairo, Calcutta, etc.
5. Make a scale drawing from a picture by lightly superimposing a grid over it and repeating it in a scaled-down or scaled-up size, on a blank sheet of paper. The same principle applies to the copying and scaling of a map or part of a map. It is important to realize that scaling can be useful for either increasing or decreasing the size.

Program 5

AT YOUR SERVICE

This program examines the various types of mathematics found at a service station and some of their operations and applications.

Program Content

A boy takes his flat bicycle tire to the local service station for help, but he does not have the money for a new tube. Although the owner is very busy, he offers to fix the tire if the boy will help by doing odd jobs around the station. This gives the boy the opportunity to learn about the many activities involved in this kind of business and to work with various aspects of mathematics. These include calculations, making changes, using credit cards, considering volume, and reading gauges. No attempt is made to deal with these applications in depth,

Prog. No.	CBC Ontario Network	CBLT Channel 6 Toronto	CBOT Channel 4 Ottawa	CKLW Channel 9 Windsor	CHCH Channel 11 Hamilton	CJOH Channel 13 Ottawa

6	June 12, 9:40–10:00	June 12, 9:40–10:00	June 12, 9:40–10:00	June 12, 10:30–10:50	June 12, 9:40–10:00	

since it is hoped that the students will examine the applications that interest them after the telecast.

Pre-Viewing Suggestions

1. A class discussion concerning the various operations of a service station could bring out many of the uses of mathematics. Some of these applications will be dealt with in the program; others can be further examined by interested groups or individuals.
2. It would be helpful if the students were familiar with the concepts of air pressure and the displacement of gas or liquid.

Post-Viewing Suggestions

1. Make arrangements for interested groups, individuals or the class as a whole to visit a garage. Such a visit should have a specific purpose: to search for definite information or to be used in a demonstration. The information should be reported and/or demonstrated to the class, with time reserved for a discussion of the findings.
2. Have the students develop a flow chart indicating all of the industries that depend on the automobile.
3. Visit an automotive diagnostic centre or a safety check centre to survey the types of tests performed and the equipment used. This will most likely be too complicated for children at this stage. However, tests using bicycles may be suggested and these could be conducted at school. Groups could be formed to choose, develop, and explain a test or a series of tests on bicycles. These tests could include any of the following suggestions:
   - Speedometer Accuracy Test — using a speedometer and a stop watch over a measured distance. The distance can be determined from the circumference of the bicycle tire.
   - Mileage Test — test the accuracy of an odometer, measure the circumference of a tire, and determine the number of revolutions required to kick over the odometer.
   - Brake Test — test the distance required for stopping from either a specified speed at a specified point or at a fixed point on a hill. Are some types of brakes better than others?
   - Air Pressure Test — measurement with and without the bicycle rider. What is the relationship between high and low tire pressure and the pedaling effort required?
   - Lubrication and Function of Bearings Test — roll freely down a hill. Measure the distance covered before and after lubrication and with riders of different weights.
   - Other tests can be devised by the students.

Program 6

SHOPPING FOR MATHS

A shopping trip to a supermarket emphasizes the variety of mathematical notions that can be found there.

Program Content

A husband sets out to show his wife how to shop for groceries scientifically to save money. As they move through the store, mathematics is brought into the program incidentally. They adopt a tallying system and round off prices to keep track of the total cost of their groceries. A weight-price chart on a set of scales is examined and the prices of various products are compared in relation to such factors as the size of the package, its weight, etc. The program also briefly examines the principle of operating the cash register, making change, and estimating.

Pre-Viewing Suggestions

1. A general discussion may be the best introduction to this program. Different methods for shopping could be examined — using a list, buying from memory, or buying on impulse. Do the students keep track of the costs of the items they have selected to avoid over-spending? How do they decide to buy a certain size, brand, or price range of products, such as soap or breakfast food? What are some of the different shapes of containers found in a supermarket? Does there appear to be any reason for this or for the different kinds of materials used for packaging?

Post-Viewing Suggestions

1. Ask the students if they can think of any easier or more accurate method of tallying.
2. The students could devise a common shopping list. They could go to the supermarket in groups or individually to tally up the total cost and to find the "best-buys". Comparisons and a discussion of values would follow.
3. At the supermarket, the children might have an opportunity to weigh meat or fruit and to learn how to use the price chart on the scales. A set of these scales might be borrowed for use in the school.
4. Note different shapes in packaging and different ways of stocking, shelving or displaying merchandise. Discuss any possible reasons for the shapes and materials used in packaging.

Professional Development
10 programs, 30 minutes each

This ETVO series consists of productions made by students which have been submitted to the province-wide ETVO Student Production Competition.

Program 9

Region 9

Program 9 consists of two student films from Region 9: "The Great Station Robbery" and "The Battle of Hastings". Both productions were class projects.

"The Great Station Robbery" attempts to record the early styles of film-making. The basic plot involves two villains who rob an elderly station master and abscond with the money. The chase scenes on railway hand-cars are amusing and techniques such as speeded filming cause the production to resemble the early "flichers" of the twenties. The film has a surprise ending.

The second film, "The Battle of Hastings", is an interpretation of that historic battle by the Grade 9 students of Sydenham High School.

Program 9

Region 9

Winning Entry — "The Great Station Robbery"

Students — A group of boys from Lakefield College School.

Staff Advisor — Mr. J. Matthews

School — Lakefield College School, Lakefield, Ontario

Runner-Up — "The Battle of Hastings"

Students — Grade 9 students

Staff Advisor — Mr. Doug Steele

School — Sydenham High School
Frontenac Board of Education

Program 10

Region 10

The last program in this series consists of two student productions from Region 1: "Project Post Narrows" from Red Lake High School and, if time permits, "The Marauders" from Atikokan High School.

"Project Post Narrows" is a documentary film about an archaeological field trip. A Grade 11 class from Red Lake High School made the trip to the former Hudson Bay Company Post on Red Lake. The purpose of the project was to approximate as closely as possible an actual archaeological expedition.

"The Marauders", tentatively scheduled for Program 10, is a version of one act of the ***Insect Play*** by Josef and Karel Capek. The students at Atikokan High School felt that their version would have a message for viewers.

A special segment dealing with techniques of filmmaking has been designed for inclusion in this broadcast in the event that "Marauders" cannot be presented.

Program 10

Region 10

Winning Entry	— "Project Post Narrows"
Students	— Grade 11 students of Red Lake High School.
School	— Red Lake District High School Red Lake, Ontario
Runner-Up	— "The Marauders"
Students	— Students from Atikokan High School
School	— Atikokan High School Atikokan, Ontario

These programs are the last in this year's "Creative Talent" series. ETV extends congratulations to all those students who participated in this series. The objectives of the series were more than met and the interest and involvement of the students of the province have encouraged the Branch to extend this idea by producing "Series Seventy" next year. This year's entries ranged from sophisticated split-screen colour to ordinary black and white 8mm productions. Entries from larger population centres generally tended to focus on current controversial issues such as drugs and pollution while a more light-hearted approach was taken by students in smaller centres. Live animation, cartoon animation, silent movie approach, colour slides and many more techniques were employed.

The ETV Branch is looking forward to the entries for "Series Seventy".

VOTRE ÉVALUATION

Le département de la TÉVÉO est désireux de recevoir vos commentaires et vos suggestions qui lui permettront d'améliorer ses futures émissions télévisées et de répondre aux besoins des élèves. Le coût prohibitif des blancs d'évaluation port payé nous impose une utilisation restreinte. Toute autre source d'évaluation nous intéresse. Vous pouvez remettre votre évaluation au Conseiller en télévision éducative de votre région où les adresser directement à:

Channel Identification

CBC and Affiliates

The CBC Ontario Network includes the following TV stations:

BARRIE	CKVR-TV	Channel 3
KINGSTON	CKWS-TV	Channel 11
LONDON	CFPL-TV	Channel 10
NORTH BAY	CFCH-TV	Channel 10
PEMBROKE	CHOV-TV	Channel 5
PETERBOROUGH	CHEX-TV	Channel 12
PORT ARTHUR	CKPR-TV	Channel 2
SAULT STE. MARIE	CJIC-TV	Channel 2
SUDBURY	CKSO-TV	Channel 5
TIMMINS	CFCL-TV	Channel 6
WINGHAM	CKNX-TV	Channel 8

Other CBC stations include CBLT (Channel 6, TORONTO), CBOT (Channel 4, OTTAWA) and CKLW (Channel 9, WINDSOR). However these stations are not always carried on the CBC Ontario Network at the times listed for the CBC. Therefore, the ETVO Monthly Schedule lists the times for these stations separately. The times for broadcasts on the independent stations CHCH-TV (Channel 11, HAMILTON) and CJOH-TV (Channel 13, OTTAWA) are also listed separately in the schedule. The broadcasting schedule for CJSS-TV (Channel 8, CORNWALL) is the same as that of CJOH-TV (Channel 13, OTTAWA).

Identification des postes

Le réseau français de radio canada comprend les postes suivants:

OTTAWA	CBOFT	Canal 9
ELLIOT LAKE	CBFST-3	Canal 12
HAMILTON	CHCH	Canal 11
HEARST	CBFOT-2	Canal 7
KAPUSKASING	CBFOT-1	Canal 12
OTTAWA	CJOH	Canal 13
ROUYN-NORANDA	CKRN-TV	Canal 4
STURGEON FALLS	CBFST	Canal 7
SUDBURY	CBFST-1	Canal 13
TIMISKAMING	CBFST-2	Canal 12
TIMMINS	CBFOT	Canal 9

Les heures de diffusion pour ces postes sont les mêmes qu'énumérées pour CBOFT (canal 9, Ottawa), avec l'exception de CHCH-TV (canal 11, Hamilton), CJOH (canal 13, Ottawa), CKLW (canal 9, Windsor) et CKRN-TV (canal 4, Rouyn). On retrouve chacun séparément dans l'horaire mensuel de la TÉVÉO.
